AUDITOR'S TRANSMITTAL

The Honorable Michael F. Easley, Governor
Members of the North Carolina General Assembly
The Board of Directors of Fayetteville Technical Community College
Dr. J. Larry Keen, President

Ladies and Gentlemen:

We have completed our audit of Fayetteville Technical Community College. This audit was conducted during the period from September 12, 2007, through November 5, 2007. The audit was conducted in accordance with *Government Auditing Standards* and *Information Systems Audit Standards*.

The primary objective of this audit was to evaluate information systems (IS) general controls at Fayetteville Technical Community College. The scope of our IS general controls audit included general security, access controls, systems software, physical security, and disaster recovery. Other IS general control topics were reviewed as considered necessary.

This report contains an executive summary and audit results which detail the areas where Fayetteville Technical Community College has performed satisfactorily relevant to our audit scope, where improvements should be made, and where further study is necessary.

We wish to express our appreciation to the staff of Fayetteville Technical Community College for the courtesy, cooperation and assistance provided to us during this audit.

North Carolina General Statutes require the State Auditor to make audit reports available to the public. Copies of audit reports issued by the Office of the State Auditor may be obtained through one of the options listed in the back of this report.

Respectfully submitted,

A handwritten signature in cursive script that reads "Leslie W. Merritt, Jr.".

Leslie Merritt, Jr., CPA, CFP
State Auditor

EXECUTIVE SUMMARY

We conducted an Information Systems (IS) audit at the Fayetteville Technical Community College from September 12, 2007, through November 5, 2007. The primary objective of this audit was to evaluate the IS general controls in place during that period. Based on our objective, we report the following conclusions:

General security involves the establishment of a reasonable security program that addresses the general security of information resources. Fayetteville Technical Community College has established a reasonable security program that addresses the general security of information resources. *We did not identify any significant weaknesses in general security during our audit.*

The **access control** environment consists of access control software and information security policies and procedures. We found several weaknesses in access controls. Due to the sensitive nature of the conditions found in these weaknesses, we have conveyed these findings to management in a separate letter pursuant to the provision of North Carolina G.S. 147-64.6(c)(18).

Systems software is the collection of programs that drive the computer. The selection of systems software should be properly approved and the software should be maintained by the computer center. *We did not identify any significant weaknesses in systems software during our audit.*

Physical security primarily involves the inspection of the agency's computer center for the controls that should reasonably secure the operations of the computer center from foreseeable and preventable threats from fire, water, electrical problems, and vandalism. We did not identify a significant weakness in the physical security. *We did not identify any significant weaknesses in physical security during our audit.*

A complete **disaster recovery** plan that is tested periodically is necessary to enable Fayetteville Technical Community College to recover from an extended business interruption due to the destruction of the computer center or other Fayetteville Technical Community College assets. Our audit did identify a significant weakness in disaster recovery. *We did not identify any significant weaknesses in disaster recovery during our audit.*

AUDIT OBJECTIVES, SCOPE, AND METHODOLOGY

OBJECTIVES

Under the *North Carolina General Statutes* 147-64.6, the State Auditor is responsible for examining and evaluating the adequacy of operating and administrative procedures and practices, systems of accounting, and other elements of State agencies. IS general control audits are examinations of controls which effect the overall organization and operation of the IS function. This IS audit was designed to ascertain the effectiveness of general controls at Fayetteville Technical Community College.

SCOPE

General controls govern the operation and management of computer processing activities. The scope of our IS general controls audit was to review general security issues, access controls, systems software, physical security, and disaster recovery which directly affect Fayetteville Technical Community College's computing operations. Other IS general control topics were reviewed as considered necessary.

METHODOLOGY

We audited policies and procedures, interviewed key administrators and other personnel, examined system configurations, toured the computer facility, tested on-line system controls, reviewed appropriate technical literature, reviewed computer generated reports, and used security evaluation software in our audit of general controls. We conducted our audit in accordance with the standards applicable to performance audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States and *Information Systems Audit Standards* issued by the Information Systems Audit and Control Association.

BACKGROUND INFORMATION

Fayetteville Technical Community College is one of 58 institutions in the North Carolina Community College System. Fayetteville Technical Community College serves as a comprehensive community college that adheres to an open-door policy by offering educational opportunities to applicants regardless of age, sex, national origin, race, religion, disability or political affiliation. The purpose of Fayetteville Technical Community College is to provide low cost vocational/technical, general education, college transfer, and continuing education programs which meet the needs and desires of its students and community. The College is in partnership with the public school system through Tech Prep and other programs to improve the educational base of society. Fayetteville Technical Community College encourages lifelong learning and strives to prepare students for further educational experiences. Further, agreements with four-year colleges and universities support the educational continuum from high school through the baccalaureate degree. Fayetteville Technical Community College is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools located in Decatur, Georgia.

The IT division at Fayetteville Technical Community College is referred to as the Management Information Services (MIS) division. The Director of MIS is responsible for the entire computing of Fayetteville Technical Community College and heads the MIS division. This position reports to the Vice President for Administrative Services. The mission statement of the community college is to open the door of opportunity for individuals seeking to improve their lives and well being by providing:

- Education, training, and retraining for the workforce, including basic skills, occupational, and pre-baccalaureate programs.
- Support for economic development through services to business and industry.
- Services to communities and individuals which improve the quality of life.

AUDIT RESULTS

The following audit results reflect the areas where Fayetteville Technical Community College has performed satisfactorily and where recommendations have been made for improvement.

GENERAL SECURITY ISSUES

General security issues involve the maintenance of a sound security management structure. A sound security management structure should include a method of classifying and establishing ownership of resources, proper segregation of duties, a security organization and resources, policies regarding access to the computer systems and a security education program. *Our audit did not identify any significant weaknesses in general security.*

ACCESS CONTROLS

The most important information security safeguard that Fayetteville Technical Community College has is its access controls. The access controls environment consists of Fayetteville Technical Community College's access control software and information security policies and procedures. An individual or a group with responsibility for security administration should develop information security policies, perform account administration functions and establish procedures to monitor and report any security violations. We noted a number of weaknesses in access controls. Due to the sensitive nature of the conditions found in the weaknesses, we have conveyed these findings to management in a separate letter pursuant to the provision of North Carolina G.S. 147-64.6(c)(18).

SYSTEMS SOFTWARE

Systems software is the collection of programs that the computer center uses to run the computer and support the application systems. This software includes the operating system, utility programs, compilers, database management systems and other programs. The systems programmers have responsibility for the installation and testing of upgrades to the system software when received. Systems software changes should be properly documented and approved. *Our audit did not identify any significant weaknesses in system software.*

PHYSICAL SECURITY

Controls over physical security are designed to protect a computer center from service interruptions resulting from fire, water, electrical problems, vandalism, and other causes. Fayetteville Technical Community College's physical security controls ensure that the computer service center is reasonably secure from foreseeable and preventable threats to its physical continuity. *Our audit did not identify any significant weaknesses in physical security.*

DISASTER RECOVERY

Disasters such as fire and flood can destroy a computer service center and leave its users without computer processing support. Without computer processing, many college services

AUDIT RESULTS (CONCLUDED)

would grind to a halt. To reduce this risk, computer service centers develop disaster recovery plans. Disaster recovery procedures should be tested periodically to ensure the recoverability of the data center. *Our audit did not identify any significant weaknesses in disaster recovery.*
